Thank you Miranda. It is good that the levels are low.

Subject: Gold King Info for Branch Manager's Call

Hi Stacey,

Here is an update on the Gold King response based on what I know.

So far, all surface water, groundwater (drinking water wells), and sediment sampling data that has been collected has been below all screening levels (MCL, acute aquatic life, chronic aquatic life, and recreational). Also, we are working on creating trend graphs to display the data. The Region continues to hold regular calls with Region 8, HQ, NMED, and other partners to discuss data and results.

I hope this helps. Please let me know if you need anything else.
